Federal Attorney-General's Department adopts ExecCorro for its Parliamentary Workflow System

The Federal Attorney-General's Department (AGD) today signed a $1.3M contract with Random Computing Services for the implementation of the vendor's successful Parliamentary Workflow System, the **_ExecCorro for Government_** suite.

The Department, which runs Microsoft Exchange, already runs Random Computing's advanced diary management system, mobileX for Government. **ExecCorro for Government** will complement and integrate with these systems as well as with the Department's current EDRMS.

The Department has had correspondence management as a high agenda item over the last year or so and it's a great move forward for AGD to adopt local ACT proven technology. The system will reduce the cost of processing Ministerial correspondence, while at the same time delivering new modules, such as Questions On Notice, Question Time Briefs, Secretary's Corro and Cabinet Tracking.

Director of Random Computing, Jed Johnson said "We are very pleased to see **ExecCorro** adopted by the Attorney-General's Department. This 3-year contract enables us to provide the high quality technical and software support that we are well-known for, whilst improving the client-side technology to maximise the workflow tool for the Department's Exchange environment".

Many other Government agencies are set to benefit from this contract which includes delivery of a new web client front-end to the popular workflow tool already run by many Departments. These include the Department of Foreign Affairs and Trade, the Department of Broadband, Communications and the Digital Economy, the Department of Immigration and Citizenship and NSW and Victorian State Governments. The new web client, which uses Web 2.0 technology, will enable Departments to replace the current Lotus Notes client front end with web browser clients and still retain the benefits of the powerful ExecCorro parliamentary workflow system.

what is ExecCorro ?
ExecCorro for Government is a suite of sophisticated Parliamentary workflow modules that assists Government to achieve its Open Government and e-Government objectives.

Working independently in both MS Exchange and IBM Domino environments ExecCorro provides Departments with the freedom to perform platform upgrades virtually independently of this business critical application. The server size is usually Windows based, but is also Linux friendly.

The main **Ministerial Correspondence** module covers
Ministerials,
Campaigns,
Submissions (Minutes) and
Briefs.

The other **ExecCorro** modules are:-

Questions On Notice, Question Time Briefs, Secretary's Correspondence, Senate Estimates, Cabinet Tracker and **Ministerial Office Correspondence.**

what makes ExecCorro special ?
ExecCorro is proven technology based upon the workflow business and system rules that have been used by DFAT, DBCDE, DIAC and State Governments for more than 10 years. It has advanced security and auditing, integrated scanning and workflow that match Departmental needs, handling on-line correspondence from citizens to Department Correspondence Areas (MCU's), to Co-ordination Officers (MCOs), to desktop writers, Responsible Officers and Ministerial Staff and back out to Constituents. Citizens can write to Departments or Ministers by e-mail and have their e-mails automatically registered in the system.

An extremely powerful feature is ExecCorro's **real-time re-organisation** capability that can handle machinery of Government changes, Branch and Division mergers, and cabinet reshuffles that impact on Organisation restructures while coping with classified security documents mid-stream in their life cycle.

Another special feature is ExecCorro's flexibility for Administration where major attributes are customisable by each Department, enabling workflow parameters and keywords to be altered in real-time to suit their daily business requirements.

AGD Branch Head, Mr Matt Hall (left), and Assistant–Director MPS, Mr Jayston Spindler (right), congratulate Mr Jed Johnson, Director of Random Computing Services, on the ExecCorro contract.
